Coforge enhances collaboration with Microsoft to boost developer productivity.

- **Trains over 10,000 developers on GitHub Copilot**
- **Coforge is positioned to lead the way in modern developer productivity with up to 30% savings and usher a new developer experience**

Princeton/Greater Noida, March 27, 2025: [Coforge Limited](link) (NSE: COFORGE), a global digital services and solutions provider as part of its AI-first approach has enhanced its collaboration with Microsoft to bring AI- integrated developer productivity solutions to its engineering services including legacy application modernization and for new code development for clients. As part of the association, Coforge has trained over 10,000+ developers on GitHub Copilot, built AI tools leveraging GitHub Copilot to forward engineer legacy applications to modern technology codes and engaged with clients in the use of GitHub Copilot in different development ecosystems across industries.

Coforge has also achieved Accelerate Developer Productivity with Microsoft Azure specialization, formerly known as DevOps with GitHub Advanced Specialization that focuses on enhancing developer productivity through Microsoft's AI-integrated toolchain. The specialization is designed to help Microsoft partners demonstrate their expertise in enhancing developer productivity using Microsoft and AI- integrated GitHub tools. As a program partner, Coforge has adopted robust processes to ensure customer success across all phases of developer productivity with Microsoft Azure, from the assessment phase to design, pilot, implementation, and post-implementation phases.

Matt Finkelstein, VP, Global Microsoft and Partner Solution Sales at GitHub said, "Congratulations to Coforge on achieving the Accelerate Developer Productivity with Microsoft Azure specialization. This will allow Coforge to support the customers on their journey toward quickly enabling business outcomes through increased developer productivity." The specialization guarantees that a partner adheres to the highest standards for service delivery and support, thereby enhancing partner visibility through prioritized ranking. This specialization is available only to partners who meet additional stringent requirements, including having an active solutions partner for Digital & App Innovation designation and demonstrating significant Azure consumed revenue or engagement.

Developers face critical challenges working with complex legacy systems and modernizing them which is triggering low productivity. Coforge is positioned to lead the way in modern developer productivity with significant savings and usher a new developer satisfaction experience. **Vic Gupta, EVP and Head of the Microsoft business at Coforge** said, "We are committed to providing the highest standards of service delivery and support to our customers by continuously and consistently adopting tools that are AI enabled and optimize developer productivity and help

customers streamline their workflows, enhance collaboration, and deliver intelligent applications faster. Training and certification of 10,000+ workforce on GitHub Copilot, who are ready to work on legacy modernization and accelerate new application development across industries is a step ahead in this journey. As a result, for one of our clients, we have forward engineered legacy codes, and have seen over 30% productivity gains for stories that requires fresh code development."
